

Dean's First OAE Presentation

Dean 06/23/25

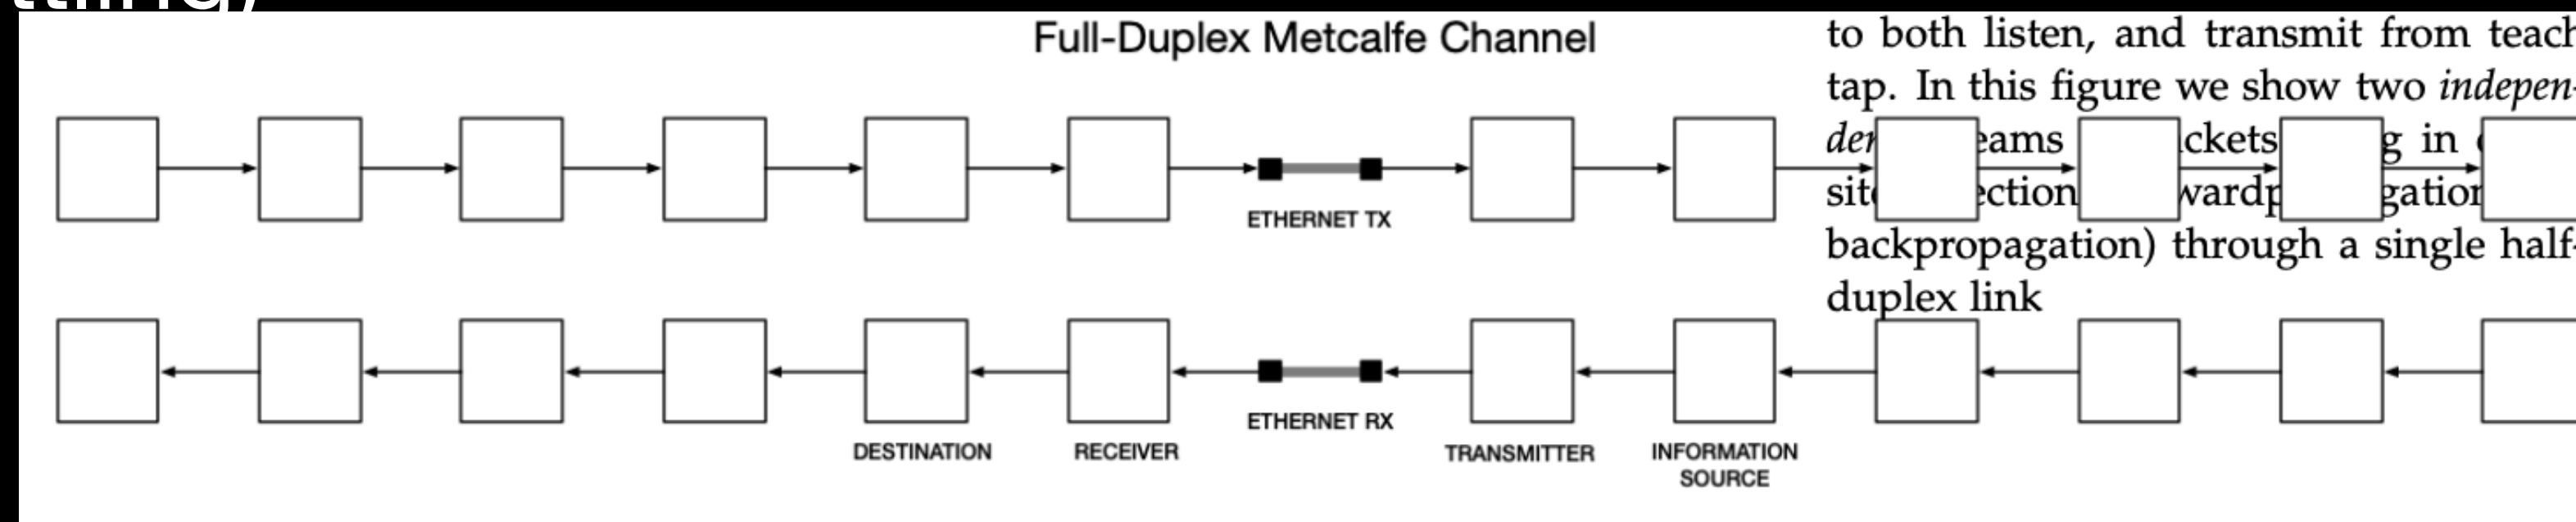

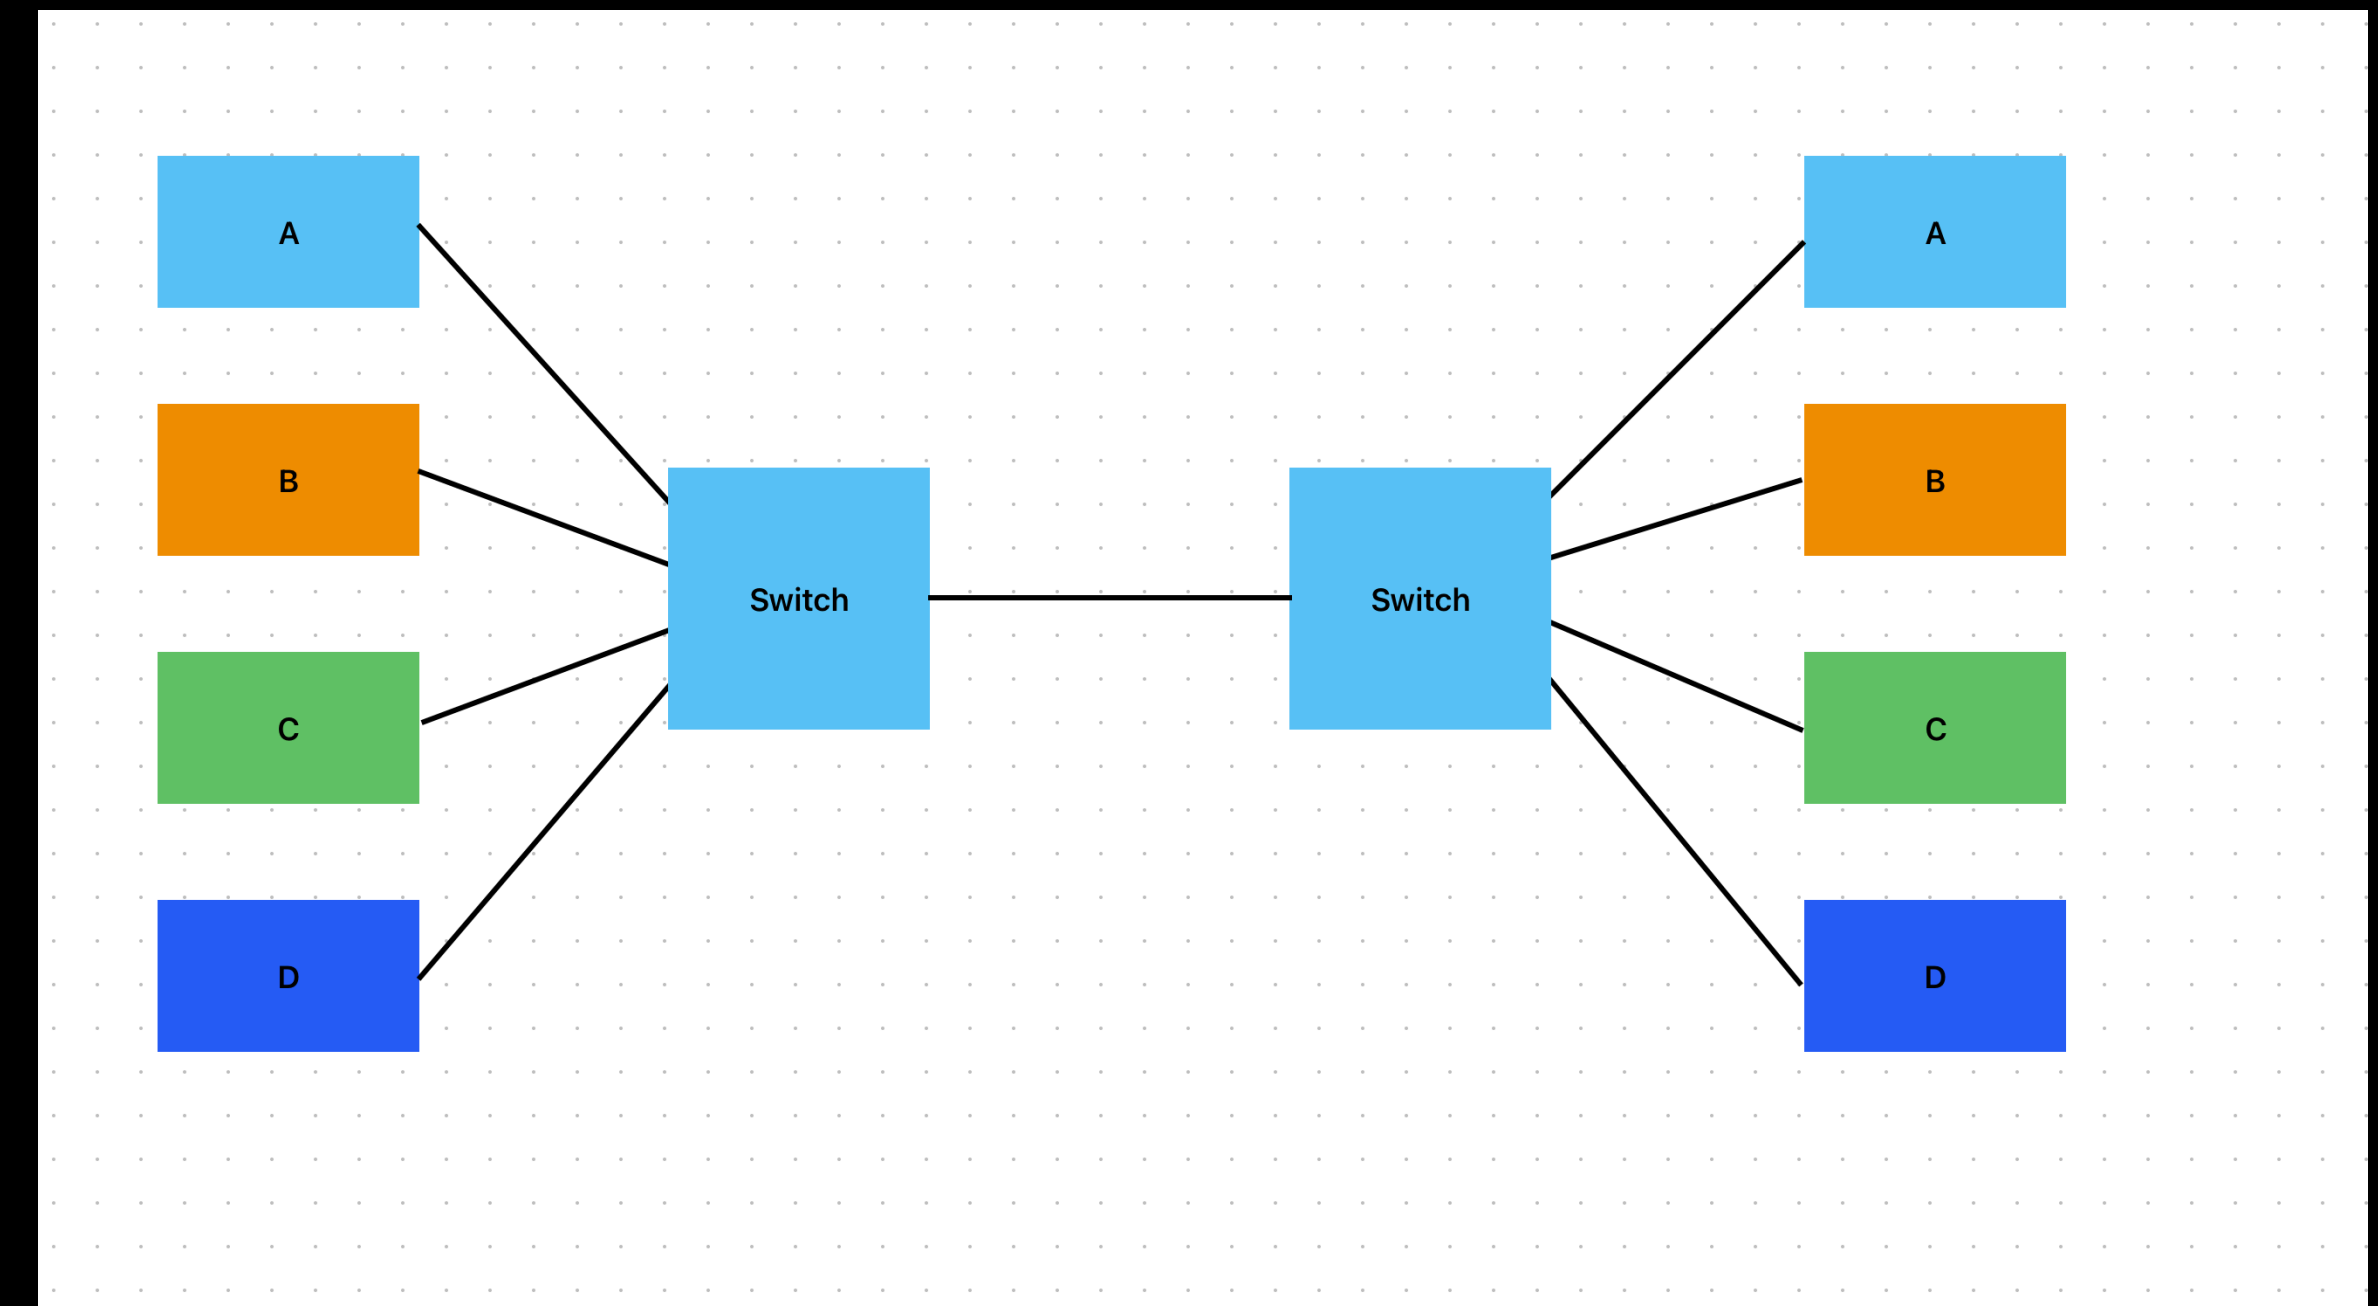

Metcalfe Half-Duplex

- Configurable # of Stations
- Throughput vs # of Stations
- Contention on the Link? Something like a timeline of all packets sent on the link vs contention from multiple competing senders. Retransmission slots
- Maybe animation?

Metcalfe Full-Duplex

- Point to Point Links
- Congestion on the center link and on each switch (buffer fills to a limit, then packets are dropped)
- Measure TCP Throughput
- TCP RENO/FAST (schemes for sender side throughput throttling)

Fibre Channel (STRETCH)

- If these were fibre channel switches, then we should be able to see credits getting allocated to senders, and senders throttling their TCP flows to match credits
- Measure throughput
